visualization for the **FUTURE OF SURGERY**

3D HD Your options have never been clearer

Improving Laparoscopic Surgery

UROLOGY

3D vision helps to identify and preserve neurovascular bundles, while allowing for more precision during dissecting, suturing, and re-anastomosis.

GYNECOLOGY

3D vision allows for easy identification of dissection planes and vasculature, enabling more accurate dissection around critical structures.

GENERAL SURGERY

3D vision helps to improve accuracy during dissection and intra-corporeal suturing, also ensuring critical structures can be more readily identified.

BENEFITS OF THE VIKING 3D^{HD} VISION SYSTEM

- OFFERS NATURAL 3D VISION
- PRESERVES THE ELEMENT OF TACTILE FEEDBACK
- IMPROVES THE SURGEON'S HAND-EYE COORDINATION
- ENHANCES DISSECTION, GRASPING, SUTURING, AND STAPLING SKILLS
- PROVIDES PRECISE SPATIAL ORIENTATION
- ACCELERATES THE SURGEON'S LEARNING CURVE
- MULTIPLE CONFIGURATIONS OFFER FLEXIBILITY TO OR STAFF
- PROVIDES EXCELLENT DEPTH PERCEPTION
